

# Invasive Plants of Midcoast Maine

Rebecca Jacobs, Knox-Lincoln SWCD  
Amanda Devine, Maine Coast Heritage Trust

# History of plant invasions

- Humans have always moved plants around
- Exponential increase in rate
- Plant introductions to Hawai`i
  - Polynesians: ~18 plants
  - 100 years after European contact: ~175 plants
  - 200+ years since European contact: >869 plants

*Rate 1 million times greater than pre-human settlement*

# Unintentional

**Hemlock woolly adelgid**

**Japanese stiltgrass**

# Intentional: Hedgerows and wildlife habitat

James H. Miller, USDA Forest Service, [www.forestryimages.org](http://www.forestryimages.org)

**Multiflora rose (*Rosa multiflora*)**

# Aesthetics

**85% of 235 invasive shrubs introduced as ornamentals**

Gregg Hill Gardens

# Native, Weed, or Invasive?

- **Native plant**
  - Has developed over hundreds or thousands of years in a particular geographic region or ecosystem
- **Non-native plant**
  - Introduced by human action beyond native range

# Native, Weed, or Invasive?

- **Weed**

- “Plant out of place”
- Native or non-native
- Threat to agricultural or natural systems

# Native, Weed, or Invasive?

- **Naturalized**

- Non-native; established outside of cultivation
- Usually found in human-dominated landscapes

- **Invasive**

- Non-native
- Established in natural or minimally managed plant communities
- Harmful ecological and/or economic effects

# Characteristics of invasive plants

- **Reproduction**
  - Flower and fruit early in life cycle
  - Many seeds / effective long distance dispersal
  - Soil seed bank
  - Vegetative reproduction
  - Unpalatable

# Characteristics of invasive plants

- **Competitive edge**
  - **Phenology**  
Annual timing of flowering, fruiting,  
leaf-out/leaf-drop
  - **Physiology**  
shade tolerance  
nutrient use  
photosynthetic efficiency
  - **Enemy release hypothesis**

# Effects of non-native invasive plants

- Reduce native plant and animal biodiversity
  - Crowd/shade native plants
  - Hybridize
  - Alter habitat
  - Compete for pollinators
  - **Extinction???**
- Alter ecosystem properties
  - Hydrology
  - Soil physical and chemical properties
- Aesthetic or Cultural
- **Economic**
  - **\$137 billion annually in US (Pimental et al, 2000)**

Kudzu

# Purple loosestrife

*Lythrum salicaria*

# Purple loosestrife control

- **Small populations**
  - Remove flower heads and destroy to prevent new populations from seed
  - Cover and smother
- **Manage water levels**
- **Biological**
  - *Galerucella pusilla*/*G. californiensis*
  - *Hylobius transversovittatus*
- **Chemical**

# Japanese knotweed

*Fallopia japonica*

Lisa L. Smith

# Japanese barberry

*Berberis thunbergii*

# Shrub honeysuckles

*Lonicera morrowii*, *L. tatarica*, *L. x. bella*, *L. maackii*

# Winged burning bush

*Euonymus alatus*

Ovens Mouth Preserve Boothbay, Maine

# Autumn olive

*Eleagnus umbellata*

# Buckthorn

*Rhamnus spp.*

# Oriental bittersweet

*Celastrus orbiculatus*

# Multiflora rose

## *Rosa multiflora*

James H. Miller, USDA Forest Service,

UGA0016232

# Norway maple & leaf litter decomposition

- Nitrogen
- Phosphorus
- Decay rate
- **N loss/year**
- **P loss/year**

Norway  
maple  
↑

1.2%  
0.071%  
0.43%/day  
**56%**  
**42%**

Sugar  
maple  
↓

0.8%  
0.043%  
0.28%/day  
**24%**  
**18%**

- Shallower litter layer
- Faster rates of N & P return to soil
- Change in microbial growth dynamics →  
effect on decomposer food web

(Carreiro et al 2000)

# Native phytophagous insects and Norway maple

- Food preferences of native insects for >24 plants/trees

## Species

Black oak

Norway maple

## Leaf area consumed

239 cm<sup>2</sup>

12 cm<sup>2</sup>

- Effect on insect/bird food supply

(Tallamy 2001)

# Sugar maple

# Norway maple

## Sugar maple

## Norway maple

## Sugar maple

## Norway maple

# Rugosa rose

*Rosa rugosa*

# Himalayan balsam

*Impatiens glandulifera*

# Himalayan balsam

*Impatiens glandulifera*

# Common reed

*Phragmites australis*

“Now what?”

# There's more than one way...

- Manual removal
- Carbohydrate starvation
- Herbicide

# Safety first!

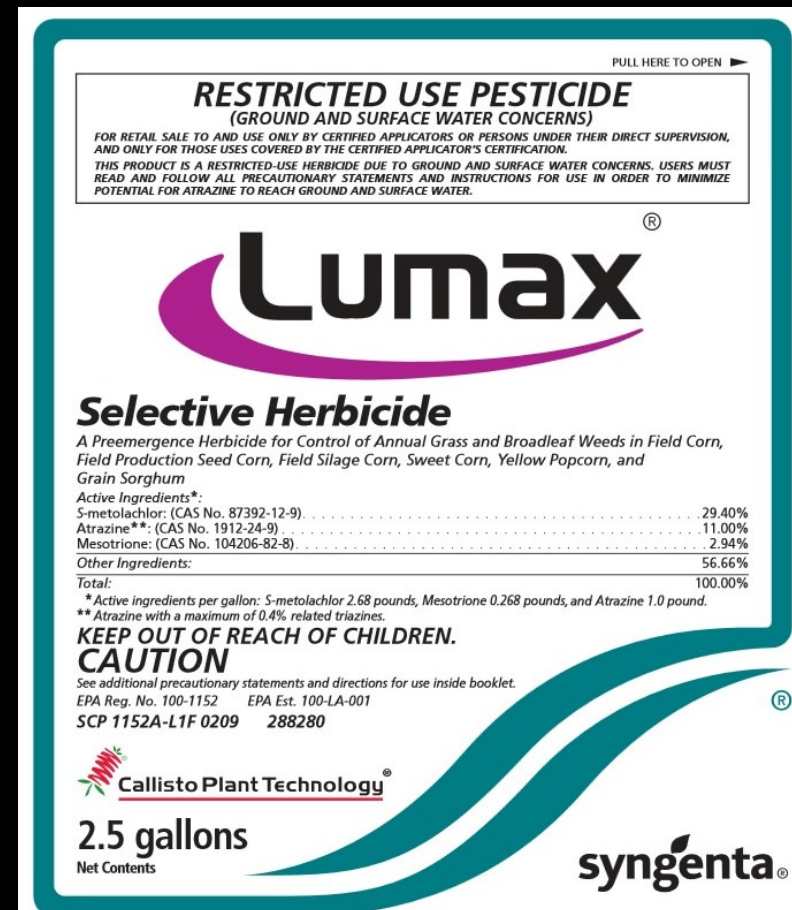

- Long sleeves
- Long pants
- Close toed-shoes
- Nitrile gloves
- Eye protection (for certain herbicides)
- Follow re-entry interval
- Wash hands before eating/drinking

# READ THE (fact-filled) LABEL.

- Is the product labeled for the use you intend for it?
- What PPE is required?
- What is the re-entry interval?
- What is the rate per acreage?

# Who needs a commercial license?

- Anyone who applies any pesticide...
  - For any type of compensation
  - In areas open to the public, such as town parks
  - As a government employee
  - For application of restricted or limited use pesticides for other than agricultural purposes (e.g., termite control)

Invasive plant  
management is a  
long term, multi-year  
commitment.

But is it always  
worth it?

# Questions to ask before you begin:

What are your goals?

Eradication vs. control/management

What are your priorities?

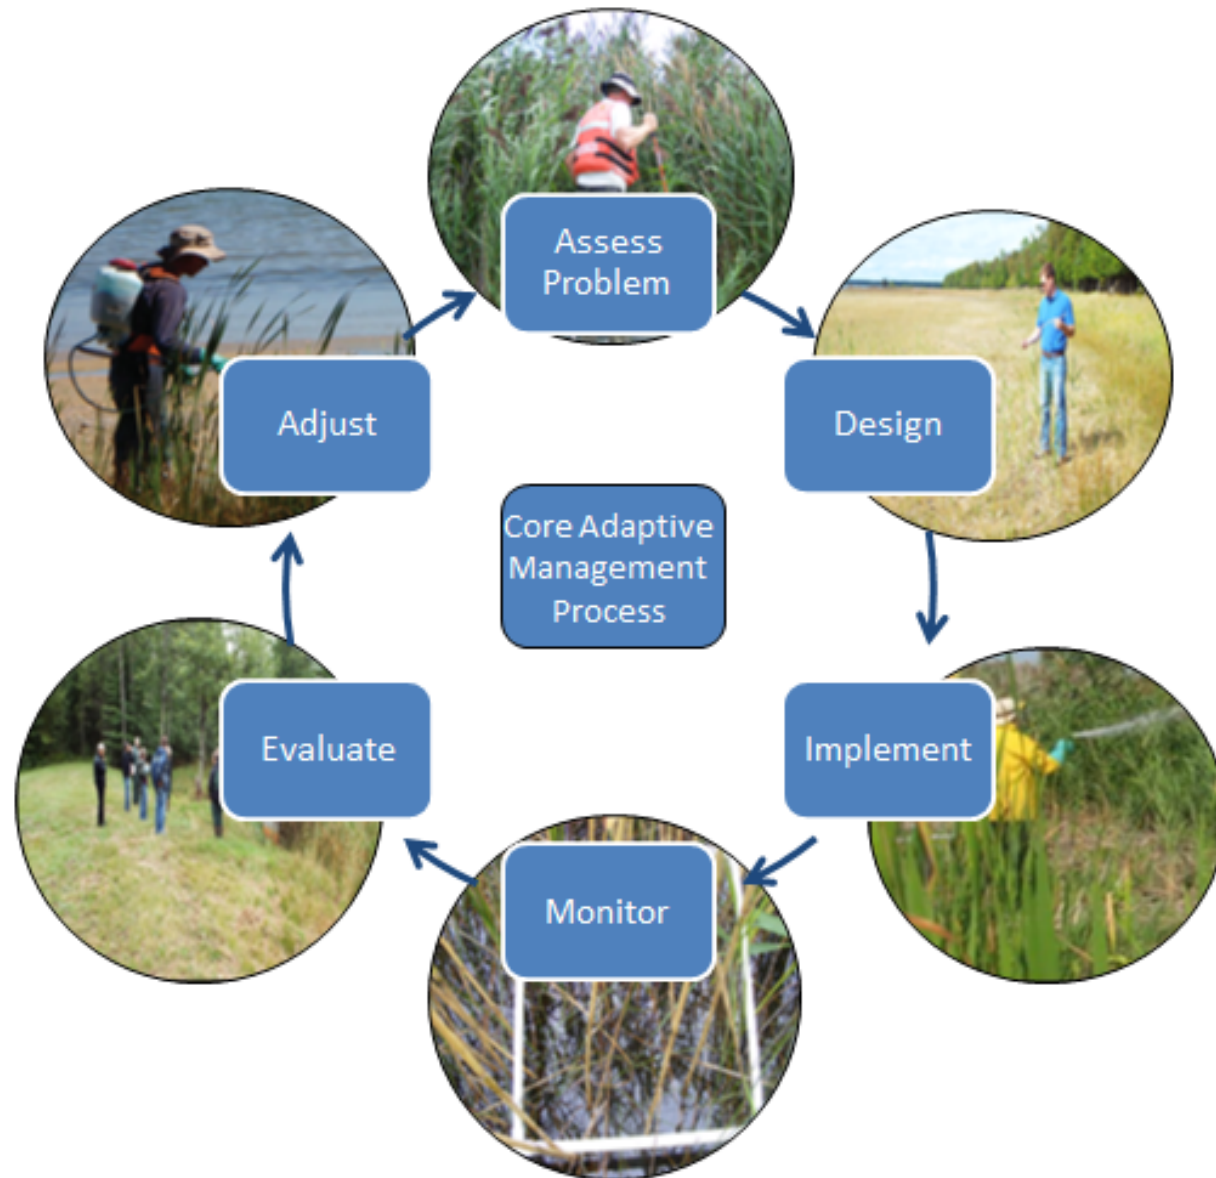

What are your resources?

- Time
- Equipment
- Labor
- Money

Do you need to revegetate?

**(Lousy low-res graphic shamelessly stolen from Great Lakes Phragmites Collaborative)**

# Native alternatives to invasive plants

# Native Plants = Native Wildlife Birds

- *Juniperus virginiana*, Eastern red cedar
  - Attracts up to 80 species of birds
- *Vaccinium corymbosum*, High bush blueberry
  - Attracts 30 species of birds

# Place-based Plants

## Shorefronts and Wetlands

- Blue flag iris
- Red-osier dogwood
- Carolina rose
- Low- or highbush blueberries
- River birch
- Red maple

# Place-based Plants

## Woodlands

# Place-based Plants

## Woodlands

- Snowberry
- Doghobble
- Columbine
- Woodland phlox
- Dogwood

- Pagoda or Alternate Leaf
- Bunchberry

# Place-based Plants

## Meadows

# Place-based Plants

## Meadows

- *Asclepias tuberosa*, Butterfly weed
- *Comptonia peregrina*, Sweet fern
- *Gailardia aristata*, Blanket flower
- *Echinacea* species
- *Filipendula rubra venusta*,  
Queen of the Prairie
- *Panicum virgatum*, Switchgrass
- *Rudbeckia* species, Black-eyed susans

# Place-based Plants

## Seaside or Brackish River Banks

- Buttonbush
- Red-osier dogwood
- Rosa carolina

Public Presentation with Doug Tallamy  
July 5, 2018 7pm  
Rockport Opera House; \$10 admission
